Anish Sandaka

Phone: (469)-883-8392 | **Email:** anishsandaka92@gmail.com

Education

The University of North Texas Bachelor of Science in Computer Science
GPA: **3.55 / 4.00** Expected Graduation: December 2027
Github: https://github.com/AnishUNT

Relevant Skills: (*Proficient)*: Python, Javascript,TypeScript, React, Next.js, FastAPI, PostgreSQL, Supabase, Git, Pandas, scikit-learn, LangChain, Google ADK, RAG, MATLAB (*Familiar)*:AWS

Work Experience

- ***Research Assistant*** ***University of North Texas*** *January 2026 – Present*
  - Built Python preprocessing pipelines to clean, encode, and audit approximately 4,500 juvenile justice records, addressing missing values and potential data leakage.
  - Benchmarked six machine learning algorithms using cross-validation and paired random-seed experiments to evaluate predictive performance.
  - Co-authored research accepted to the **ACM/IEEE JCDL 2026 Undergraduate Research Symposium**.

- ***Software Engineering Intern*** ***MOURI tech*** *May 2025-August 2025*
  - Developed AI applications using **Python, FastAPI, LangChain, and Google ADK**, implementing RAG pipelines and multi-agent workflows.
  - Built backend APIs integrating LLM services, tool calling, and structured responses to support AI-driven application features.
  - Designed and evaluated agent workflows to coordinate tools and handle user requests across multiple processing steps.

- ***Software Engineering Intern*** ***Luneblaze*** *August 2023-December 2023*
  - Developed full-stack features for **internal timesheet and work-order management**, automating business workflows.
  - Built and integrated backend services to support workflow automation across internal applications.
  - Collaborated with developers across teams to implement features and improve integration between business systems.

Projects

- ***EventScale | Next.js, TypeScript, React, Supabase, PostgreSQL***
  - Built a full-stack event management platform supporting budgets, task assignments, attendee check-in, and team collaboration.
  - Implemented passwordless authentication, Google OAuth, and role-based access control using Supabase.
- ***Contract-AI | Python, FastAPI, React, TypeScript, RAG***
  - Built a contract analysis application enabling users to upload documents and query contents using natural language.
  - Implemented RAG pipelines to retrieve relevant clauses and generate answers with citations from contracts up to 30 pages long.
  - Developed FastAPI backend services and responsive React interfaces for clause highlighting, risk analysis, and contract comparison.
